DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Jewett et al (U.S. patent no. 5,771,920). The patent to Jewett et al discloses an automated water disabling valve (10) comprising a hollow shell (12), sensing means (26) within the shell for determining if water is flowing through the shell, water flow disabling means (58), and microprocessor means (84) including timer means for causing the disabling means to shut off the water flow through the shell after expiration of a predetermined duration of fluid flow; see col. 4, lines 41-64 and col. 6, lines 16-53.

Allowable Subject Matter

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Isaacson, Jr. et al and Ames et al are cited for the additional showing of flood control devices including a flow sensor and shut-off valve in series. The patents to Cohen, Otten et al and Obermann et al are cited for the showing of fluid flow detectors including Hall effect sensors.
